Quiz # 08 Math 102 Section 08 Calculus II 1 April 2024 Monday Instructor: Ali Sinan Sertöz Solution Key

- **Q-1**) Consider the equation $3x^4 2x^2y + y^2z + xyz^3 = 65$ which defines z as a differentiable function of x and y.
 - (i) Find the value of z(1, 2). Hint: $t^3 + 2t - 33 = (t^2 + 3t + 11)(t - 3)$.
 - (ii) Calculate $\frac{\partial z}{\partial x}\Big|_{(1,2)}$ and $\frac{\partial z}{\partial y}\Big|_{(1,2)}$
 - (iii) Write the linearization of z(x, y) at the point (x, y) = (1, 2) in the form L(x, y) = Ax + By + C, where A, B and C are rational numbers.
 - (iv) Calculate $L(\frac{3}{2}, \frac{3}{2})$. Note: The difference between $L(\frac{3}{2}, \frac{3}{2})$ and $z(\frac{3}{2}, \frac{3}{2})$ is 0.0032...

Show your work in detail. Correct answers with no justification will not get any credit. Grading: 1+4+3+2=10 points

Solution: (Grader: melis.gezer@bilkent.edu.tr)

(i) Putting (x, y) = (1, 2) into the above equation we obtain $2z^3 + 4z - 66 = 0$. From the hint we see that the only real solution to this is z = 3.

(ii) We apply $\frac{\partial}{\partial x}$ to both sides of the above equation to find $12x^3 - 4xy + y^2 \frac{\partial z}{\partial x} + yz^3 + 3xyz^2 \frac{\partial z}{\partial x} = 0$. Now putting (x, y, z) = (1, 2, 3) into this we get $\frac{\partial z}{\partial x}\Big|_{(1,2)} = -1$.

Now apply $\frac{\partial}{\partial y}$ to both sides of the above equation to find $-2x^2 + 2yz + y^2 \frac{\partial z}{\partial y} + xz^3 + 3xyz^2 \frac{\partial z}{\partial y} = 0.$ Putting (x, y, z) = (1, 2, 3) into this we get $\frac{\partial z}{\partial y}\Big|_{(1,2)} = -\frac{37}{58}.$

(iii)
$$L(x,y) = \left(\frac{\partial z}{\partial x}\Big|_{(1,2)}\right)(x-1) + \left(\frac{\partial z}{\partial y}\Big|_{(1,2)}\right)(y-2) + z(1,2).$$

Putting in the values we found so far and simplifying we get $L(x, y) = \frac{153}{29} - \frac{37}{58}y - x$.

(iv) $L(\frac{3}{2}, \frac{3}{2}) = \frac{327}{116}$. For your information, $L(\frac{3}{2}, \frac{3}{2}) = 2.818...$ while $z(\frac{3}{2}, \frac{3}{2}) = 2.815...$, the difference being 0.0032....
